

# DELTA

## THERMODECK

Retro-fit

**Y**ou already have a swimming pool installed and you want to add a cover, quickly, easily and effortlessly. The DELTA automatic retro-fit cover (THERMODECK model) is the right choice for you.

It is just as efficient as the below water DELTA covers : same quality of components, same design, same manufacturing process and even the guarantee is the same. The difference comes from the place where you fix the axle - above ground and inside a bench housing, thus allowing very quick installation. It just takes half a day to install your automatic cover and make it ready for use. And you will be ready for 100% pool pleasure.

## BEAUTIFUL SWIMMING POOLS NEED DELTA PROTECTION

### Your water is nice and warm and clearer

The DELTA cover keeps away the cool night winds and cold breezes. It also protects your swimming pool against dust particles, leaves and pollen. Owing to their tested opacity coefficient, the DELTA slats prevent the process of photosynthesis and thus algae formation. The fact that your swimming pool is cleaner reduces the filtration time and the need for water treatment products.

### Reduced evaporation

On indoor pools the DELTA slats have a nearly perfect screening effect, thus avoiding evaporation and condensation on windows and walls.

### Comfortable and easy handling guaranteed

Just turn the key to release the cover mechanism. And your swimming pool will be covered in just three minutes.

## Elegant bench housing

It is up to you to choose between the highly resistant Moabi wood (the most popular tropical wood) version and the UV resistant PVC version. The bench housing, which consists of interlinking slats, prevents your cover from getting dirty and adds to the overall appearance of your swimming pool.

## Additional Precaution

The DELTA cover gives additional protection. The three air chambers inside the slat increase the floatation by up to 35% compared to the slats most commonly used. The exclusive and patented system of interlinking slats guarantees a perfectly tight joint between the slats. An anti-flexion mechanism blocks the slats from inclining towards the pool bottom by more than 15°. Due to all these factors, the DELTA covers can bear a weight of 80 kg.

## Resistance guaranteed

All materials used to manufacture the DELTA covers are subject to a strict selection process to ensure future resistance to adverse weather conditions and UV radiation. The PVC plastic materials used are always top quality, shock absorbant and calcium zinc treated. They are free of lead oxide. The interior and exterior of the axles are fitted with a highly resistant aluminium magnesium silicon alloy, treated with an anodising process. The axle interior is also reinforced with an exclusive alveolar structure, thus optimizing the ratio weight / inertia. This makes the axles unusually rigid and guarantees effortless handling.

## Little maintenance

The DELTA covers have been designed to require only little maintenance. DELTA also helps you to facilitate your pool winterizing. It only takes a few seconds to remove the motor by hand without using any tools. Thus, DELTA is the best pool protection throughout the year.

Available in two colours: slats in white and solar slats in blue. Matching end plugs. Two slat finishes: straight or tailor-made.

A PROFITABLE PROTECTION
